Over View About Marbofloxacin :

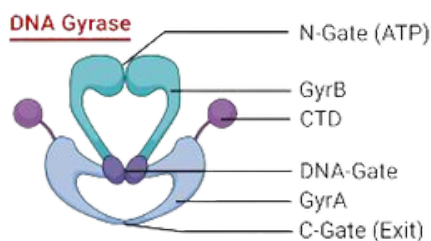

- ▶ **Marbofloxacin** is a synthetic bactericidal antimicrobial belonging to **fluoroquinolones** group which acts by **inhibition of DNA gyrase** .
- ▶ Works against gram- negative (e.g. *Escherichia coli*, *klebsiella pneumoniae*, *pseudomonas aeruginosa*) + *Mycoplasma* (lack of cell wall so resist antibiotics works by damaging bacterial cell wall) + chlamydia .

Indication: in **non-responsive** cases In cattle with:

- ▶ **respiratory infections**
- ▶ **acute mastitis caused by sensitive strains of *Escherichia coli* (coli-mastitis)**
- ▶ **diarrhea**

Each 1ml contains 160 mg Marbofloxacin

is an essential bacterial enzyme important for bacterial DNA transitions.

Dose

Marbobroad 16%
Single dose 5ml/80kg

IM

Marbobroad 10%
Single dose(IM) 2ml/25 kg
Repeated dose(IM) 1ml/50 kg
3/5 days
